Ak.god. 2025./2026.

Programsko inženjerstvo

Projektni zadatak

Blog helper

Aplikacija za developere koji žele pisati blogove uz pomoć AI-a

AUTOR:

Luka Batarelo (lbatarelo@student.unipu.hr)

GITHUB:

<https://github.com/bluka1/blog-helper>

◆ PROBLEM:

- pisanje blogova bez strukture i bez neke konkretne ideje kako iskomunicirati ono što želimo reći
 - problem se rješava vježbom pisanja blogova ili istraživanjem kako to druge osobe rade
 - potencijalno se rješava i edukacijom

◆ RJEŠENJE:

- idejno rješenje i okvir uz pomoć AI-a
 - predstavimo ideju i glavne koncepte ili damo naslov, a AI izgenerira prijedlog teksta
 - dobivamo uvid i smjernice što i kako iskomunicirati

◆ OPIS APLIKACIJE:

- korisnik može pisati, brisati, uređivati i pregledavati svoje postove
 - može koristiti AI za pomoć oko naslova te oko sadržaja samog blog posta
- korisnik može pregledavati tuđe postove

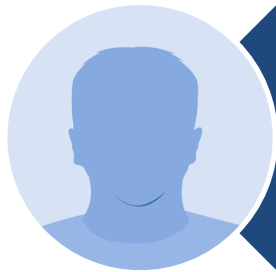

◆ O RAZVOJU:

- proces razvoja - relativno jednostavan
- dokumentacija > kod
- backend: Python
- AI: Ollama + lokalni Gemma3 model
- frontend: React

◆ BUDUĆA POBOLJŠANJA:

- poboljšati ispis koji nam LLM ponudi
- implementirati markdown editor
- dodati guardrailse na AI funkcionalnosti
- dodati korisničke postavke
- dodati filtriranje, oznake, pretraživanje...
- odabir različitih LLM-ova

Demonstracija programskog rješenja

Luka Batarelo

- frontend
- backend
- AI

Hvala!

Generiranje teksta

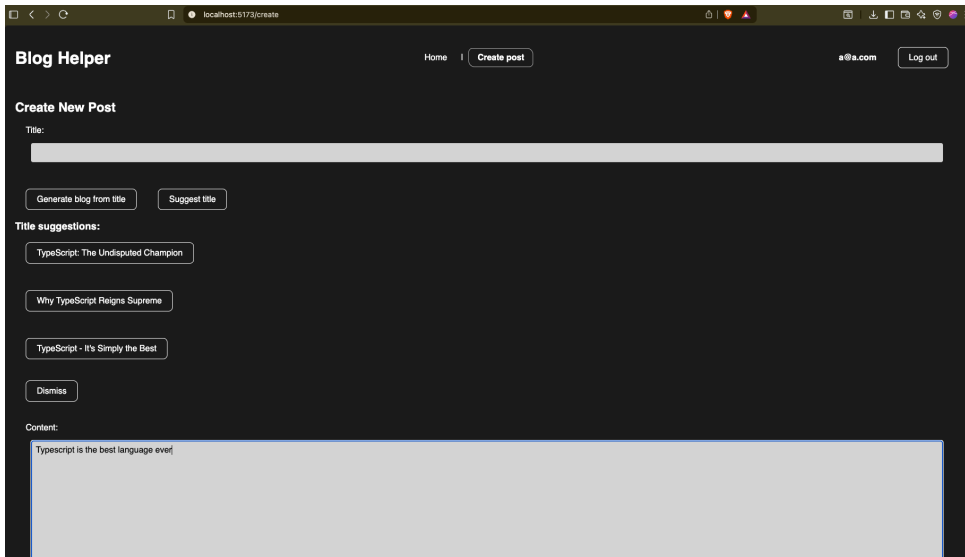

Poboljšanje teksta

The screenshot shows the 'Blog Helper' application interface. At the top, there's a navigation bar with 'Home' and 'Create post' links, and a user profile 'a@a.com' with a 'Log out' button. Below the navigation bar, the 'Create New Post' section is active. It features a 'Title:' field containing 'TypeScript - It's Simply the Best'. Below the title field are two buttons: 'Generate blog from title' and 'Suggest title'. The 'Content:' section below shows a generated text block. The text starts with 'Okay, here's a blog post based on the title "TypeScript - It's Simply the Best," aiming for under 200 words:'. It then lists several bullet points: 'Early Error Detection', 'Improved Code Maintainability', 'Better Developer Experience', and 'Scalable Projects'. The text concludes with 'Seriously, if you're building anything beyond a tiny script, TypeScript is a game-changer. Give it a try - you'll quickly see why it's simply the best.' and a link to the TypeScript website. At the bottom of the content area are two buttons: 'Improve text' and 'Create post'.

This screenshot shows the same 'Blog Helper' application interface, but with the 'Improved text (suggestion):' section expanded. The 'Improve text' button from the previous screen has been clicked, and a new text block is displayed. This block starts with 'TypeScript: Level Up Your JavaScript'. It then describes how TypeScript addresses common JavaScript challenges like bugs and tangled code. It lists several bullet points: 'Catch Errors Early', 'Maintainable Code', 'Powerful IDE Support', and 'Scale with Confidence'. The text concludes with 'Don't just take our word for it - TypeScript is rapidly becoming the standard for modern JavaScript development. Explore TypeScript today and experience the difference!' and a link to the TypeScript website. At the bottom of the improved text area are two buttons: 'Accept suggestion' and 'Dismiss'. Below these buttons is a 'Create post' button. The footer of the application shows '© 2026 Blog Helper'.

FIPU

The screenshot shows the 'Create New Post' form in the Blog Helper application. The form has a dark theme. At the top, there's a navigation bar with 'Home' and 'Create post' links, and a user profile 'a@a.com' with a 'Log out' button. The main form area has a 'Title:' label and a text input field. Below the input field are two buttons: 'Generate blog from title' and 'Suggest title'. Underneath these buttons, there's a section titled 'Title suggestions:' with three buttons: 'TypeScript: The Undisputed Champion', 'Why TypeScript Reigns Supreme', and 'TypeScript - It's Simply the Best'. At the bottom of this section is a 'Dismiss' button. Below the title suggestions is a 'Content:' label and a large text area containing the text 'TypeScript is the best language ever!'.

← Prijedlog naslova

Izmjena postojećeg bloga

The screenshot shows the 'Edit Post' form in the Blog Helper application. The form has a dark theme. At the top, there's a navigation bar with 'Home' and 'Create post' links, and a user profile 'a@a.com' with a 'Log out' button. The main form area has a 'Title:' label and a text input field containing 'TypeScript - It's Simply the Best'. Below the input field is a 'Content:' label and a large text area containing the following text:
TypeScript: Level Up Your JavaScript
JavaScript can be challenging – bugs, tangled code, and frustrating refactoring are common hurdles. That's where TypeScript comes in, transforming how you build web applications. TypeScript is essentially a smart, optional layer built on top of JavaScript that adds static typing. It's like having a vigilant code reviewer catching errors "before" they cause problems.
Here's why TypeScript is a game-changer:
* **Catch Errors Early:** TypeScript's type checking drastically reduces runtime errors.
* **Maintainable Code:** Clear types make your code easier to understand, modify, and collaborate on.
* **Powerful IDE Support:** Enjoy features like auto-completion and intelligent refactoring with modern IDEs.
* **Scale with Confidence:** TypeScript is ideal for large, complex projects, ensuring code stability and growth.
Don't just take our word for it – TypeScript is rapidly becoming the standard for modern JavaScript development. Explore TypeScript today and experience the difference!
[Link to TypeScript Website - e.g., typescriptlang.org]
At the bottom of the form are two buttons: 'Improve text' and 'Save post'.
